DETAILED ACTION

Allowable Subject Matter

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jonathan Platt, Reg. No. 41,255 on 9/1/06.

The application has been amended as follows:

In Claim 6 on page 3 line 10 the following language ^{has been}~~shall be~~ inserted between the word "shield" and the semicolon --, from another end of the shield, toward the open end --

2. The following is an examiner's statement of reasons for allowance: the prior art of record fails to teach a detector for detecting telephone-activated devices, comprising: a conductive shield having an open end for placing objects that may contain a telephone-activated device, at least in proximity thereto; a transmitter for transmitter for generating and transmitting a pseudo base station signal corresponding to a base station signal for a telephone activated device; a receiver for receiving and detecting a response signal transmitted by the telephone-activated device; wherein the transmitter directs at least part of the pseudo base station signal into the shield and wherein at least part of the transmitter is within the shield; wherein the shield is substantially conical in shape, with the open end at a wide end or wherein the detector has a weight no greater than 5lbs.

Art Unit: 2617

Oura cited in the previous office action disclosed a detector for detecting telephone-activated devices, comprising: a conductive shield 3 having an open end; a transmitter for generating and transmitting a pseudo base station signal corresponding to a base station signal for a telephone activated device; a receiver for receiving and detecting a response signal transmitted by the telephone-activated device; wherein the transmitter directs at least part of the pseudo base station signal into the shield and wherein at least part of the transmitter is within the shield. However, Oura failed to teach a conductive shield having an open end for placing objects that may contain a telephone-activated device wherein the shield is substantially conical in shape, with the open end at a wide end or wherein the detector has a weight no greater than 5lbs.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Therefore, Claims 3-21, 23-25, and 37-44 are allowed.

Conclusion
